Non Road Equipment Operations – Propane powered landscaping equipment

April 2021

Benefits of Propane

Reduced emissions

Reduced labor expense

Reduced fuel loss

Stable fuel costs

Flexible infrastructure

Reduced Emissions

Studies show that compared to a gasoline mower, propane reduces greenhouse gas emissions by 16%, sulfur oxide emissions by 17% and nitrogen oxide emissions by 19%. Propane mowers also significantly reduce other polluting emissions such as ozone and particulate matter.

These emissions benefits help landscape contractors differentiate their businesses and appeal to green minded customers and businesses that have sustainability goals.

Propane mowers can also operate in most areas during ozone action days or air quality nonattainment days.

Reduced Labor Expense

Propane refueling infrastructure is set up on site. This saves time on having to visit off site fueling stations. Multiple crew members at off site fueling stations results in added employee cost.

Some propane mowers allow for multiple tank set ups per machine allowing a crew to cover a greater mowing area.

Replacement cylinders are mobile and can be changed on site with ease creating increased productivity.

Reduced Fuel Loss

Refueling landscape equipment results in 17 million gallons of spilled gasoline in the U.S. each year. These spills can kill grass and cause environmental hazards. Propane is a contained fuel source.

Propane equipment has a closed loop fuel system and an on-premise refueling infrastructure greatly lessening the opportunity and financial impact of fuel theft.

Stable Fuel Costs

Volatile gasoline pricing does not allow for good expense management.

Landscape equipment fuel demand is based primarily in the summer during propane's low demand season allows for better pricing.

Propane suppliers can also offer fixed pricing allowing for better budgeting for landscape companies.

Flexible Infrastructure

Propane's portability and multiple storage options allow flexibility in customer storage. Companies can start with smaller fuel storage amounts and increase as they add equipment.

Landscape companies can also convert and add propane powered equipment as needed. An entire fleet does not need to be converted at one time.

Equipment can be added as other pieces of equipment are retired.

CERTIFICATION

IMPACT

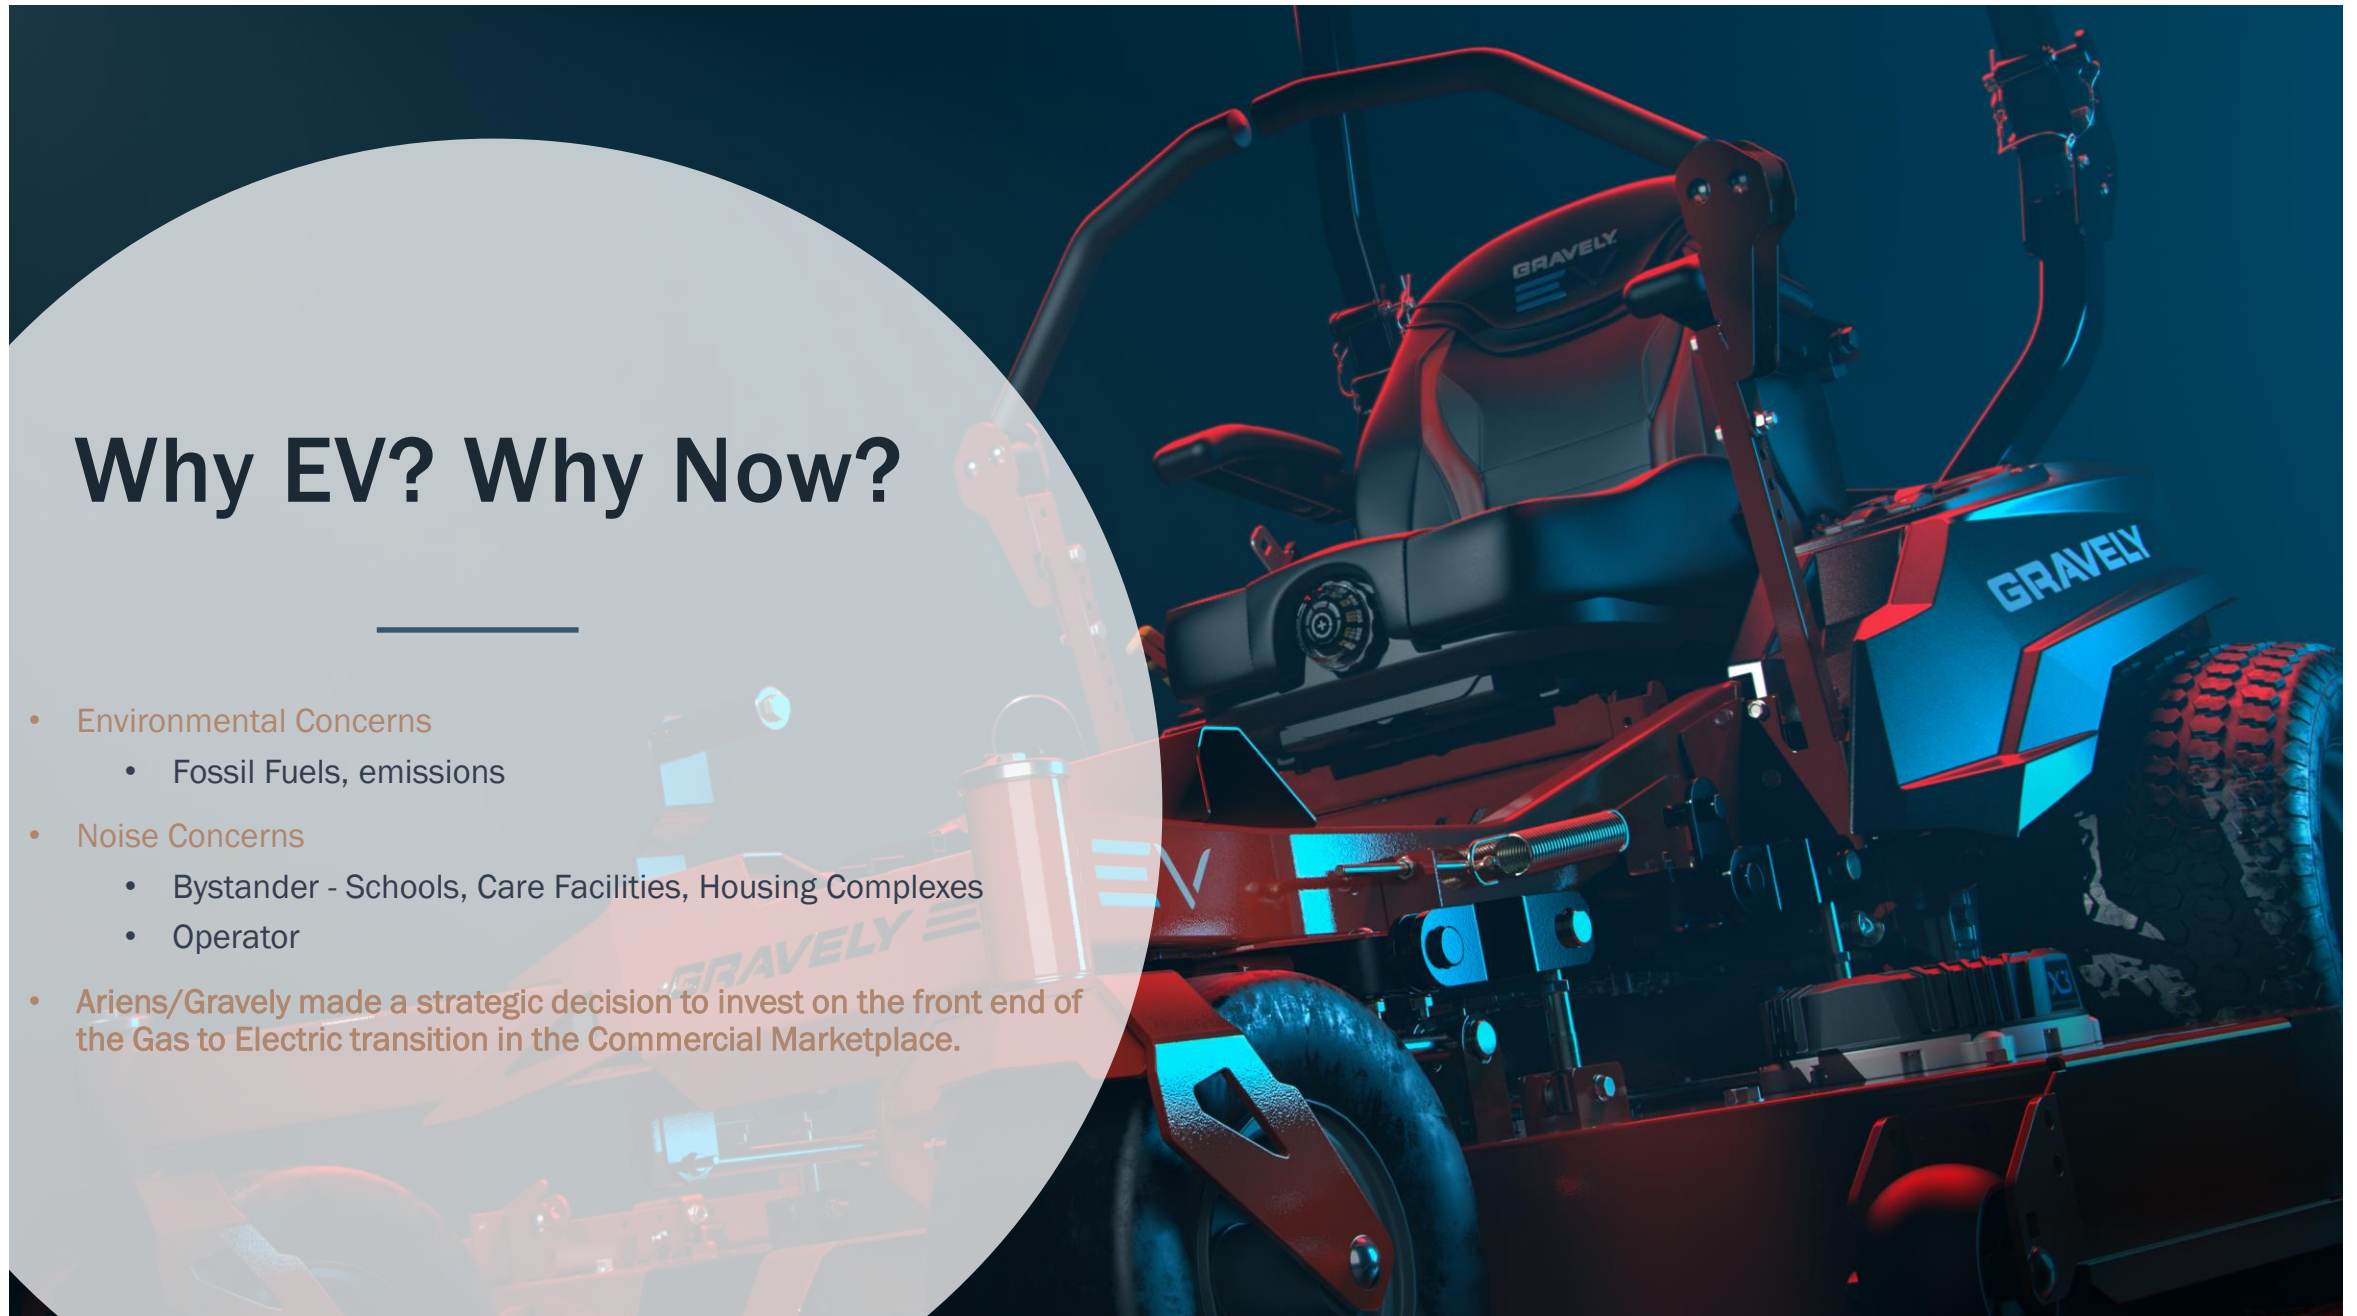

WHC CERTIFICATION 2020 **Prairie Oak Savanna**

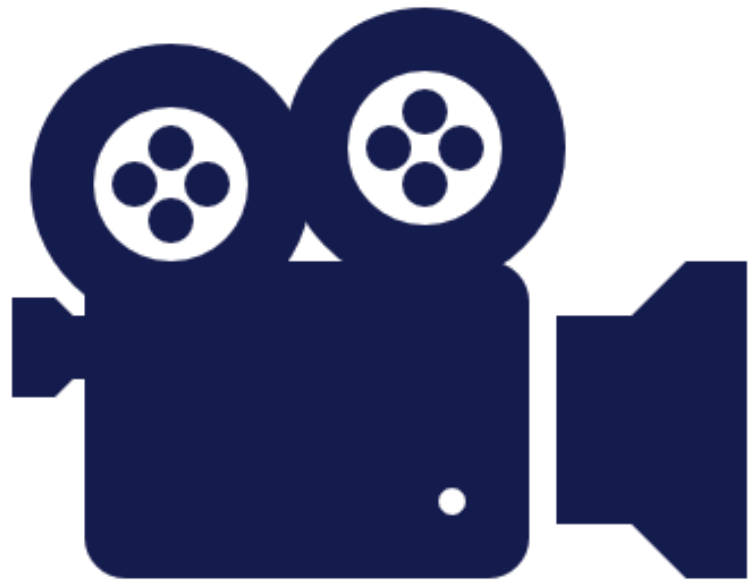

- Open-grown oaks surrounded by prairie grasses and flowering plants
- Once common in Wisconsin:
5.5 million acres
- Estimated that only 0.01 percent remains

One of the rarest habitat types in the world

Why EV? Why Now?

- Environmental Concerns
 - Fossil Fuels, emissions
- Noise Concerns
 - Bystander - Schools, Care Facilities, Housing Complexes
 - Operator
- Ariens/Gravely made a strategic decision to invest on the front end of the Gas to Electric transition in the Commercial Marketplace.

Video: Pro-Turn EV

Gravely PT- EV Complete System Solution

•The Gravely brand has over 100 years of experience in designing and developing outdoor power equipment to meet the tough demands of commercial landscape contractors.

Gravely PT-EV has the following proprietary components

FusionCore
Batteries

Wheel Drive
Motors

Spindle Motors

Gravely either developed these components or partnered with vendors to have these designed and built to our specifications

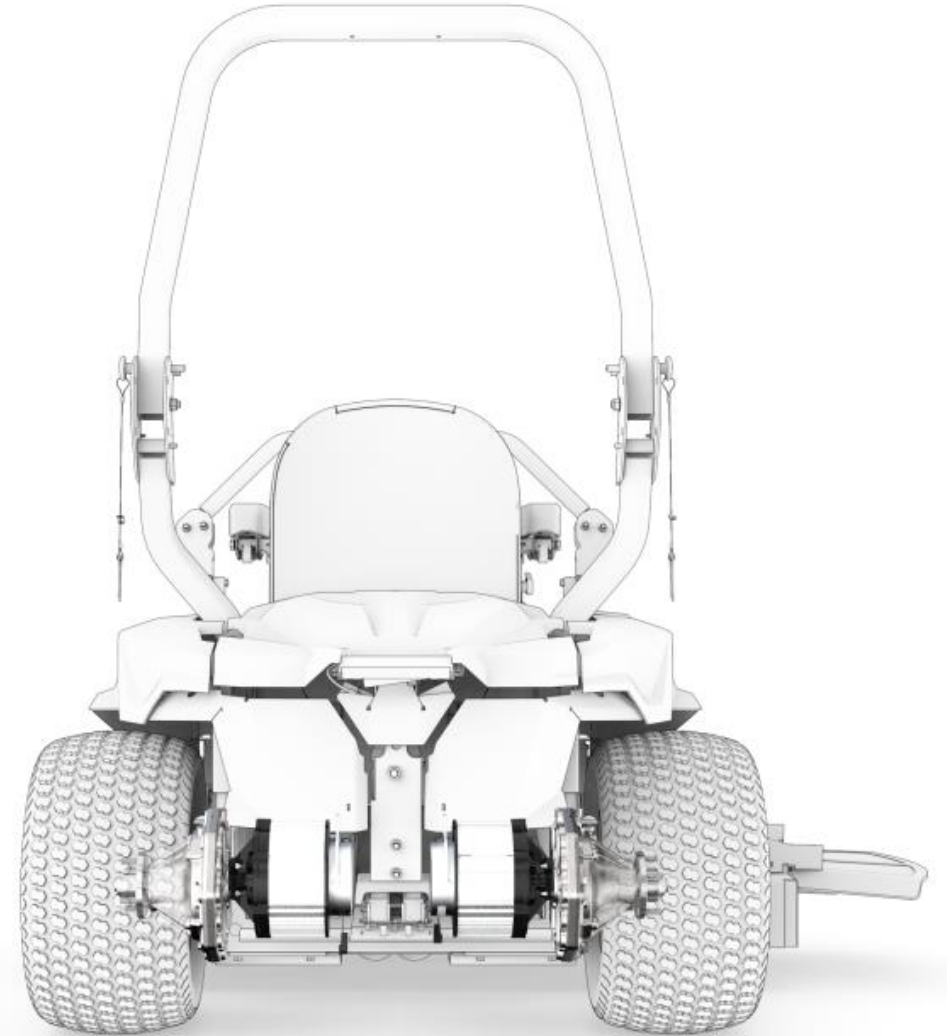

FusionCore Batteries

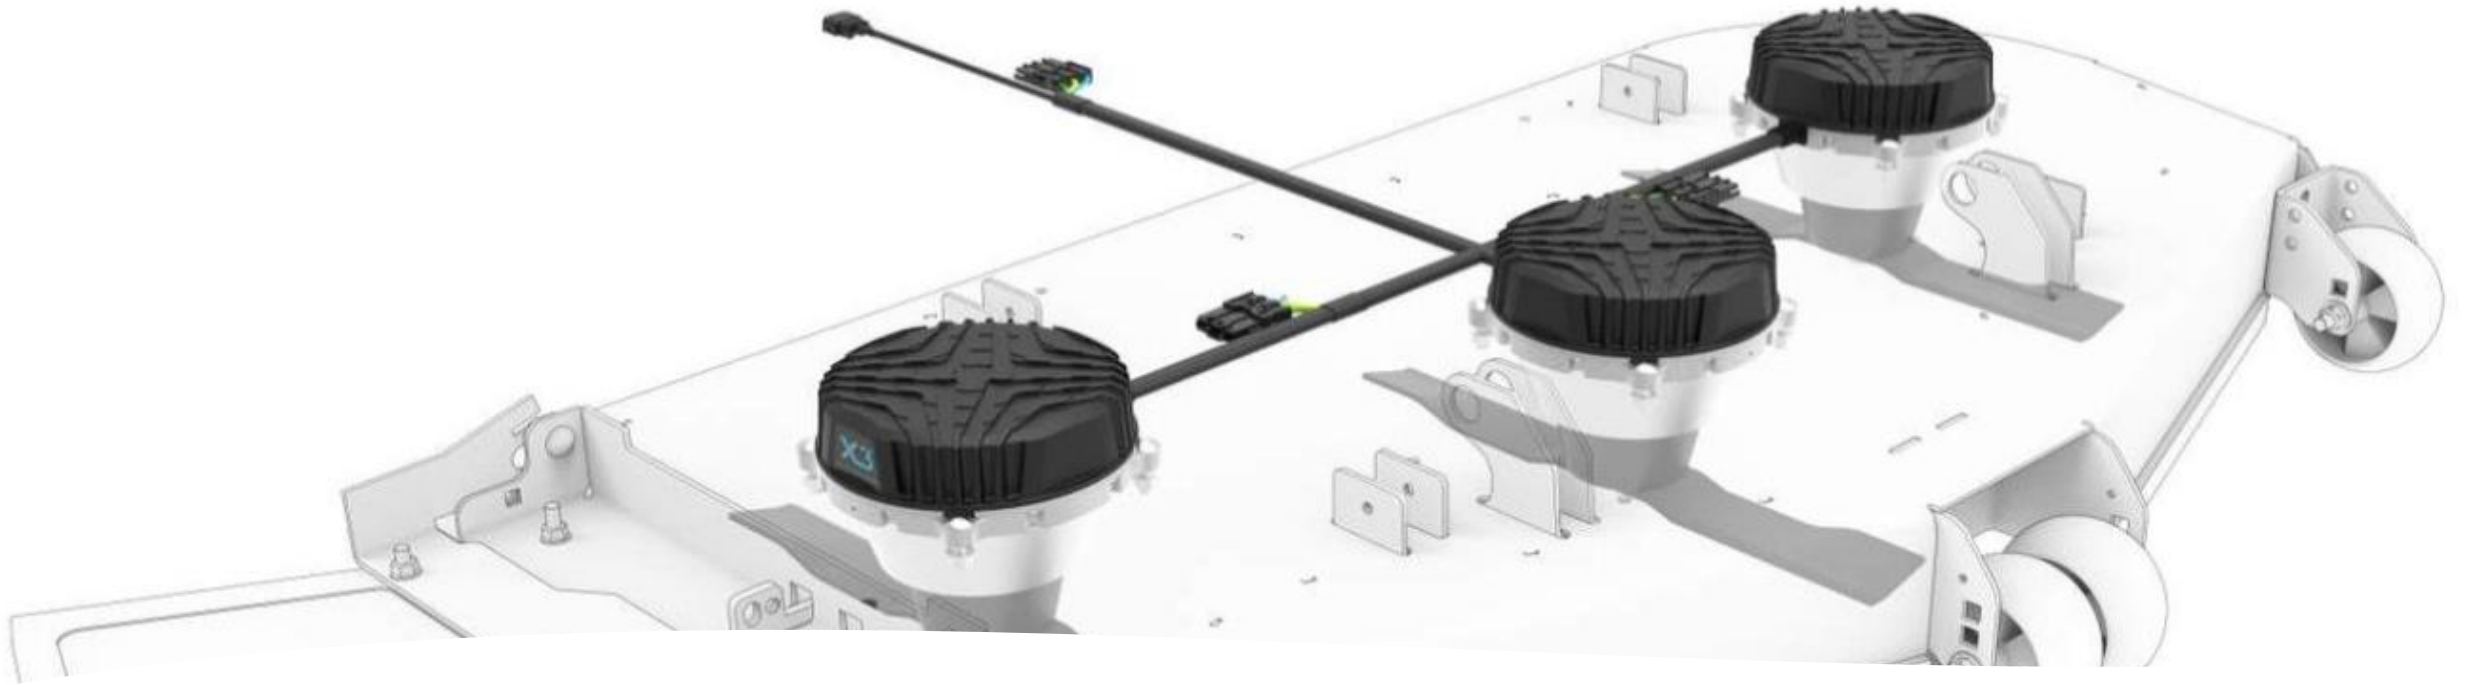

- Exclusive to AriensCo
- Power of 4-5 hrs of Continuous Cutting Time
- Light & Replaceable Quick Swap System
- Regulated by Battery Management System
- Durable

Wheel Drive Motor Summary

- Exclusive Proprietary Design
- No Hydraulic Oil / Belt Changes
- Wheel Drive Motors Almost Double Size of Competitors
- Consistent Power Delivery
- Smooth Responsive Control

Spindle Motor Summary

- Exclusive Design
- No belts
- Consistent Power Delivery
- Protective Blade Slip Feature

Barriers to Conversion

- “Range Anxiety”
 - “I can’t dump a can of gas in an electric mower when it run out of energy”
 - “If it runs out of charge the asset is useless for 12 hours”
 - “What if I can’t get through my day before it dies”
 - What if you could “dump a can of gas in it”.....
- Cost
 - What is the ROI?
- Performance
 - Will it meet our (Gravely) standard of a “Commercial Mower”?
- Technology – It’s new, is it reliable?

Full Length Video of the Gravely PT-EV

Propane mowers purchased:

- 16 Gravely Pro-Turn 472, 72" Propane riding mowers in 2012
- 16 Gravely Pro-Turn 472, 72" Propane riding mowers in 2014
- 9 Gravely Pro-Turn 472, 72" Propane riding mowers in 2017

Key Successes:

- Applied for and were awarded grants through the Propane Education & Research Council and the Illinois Propane Gas Association
- Utilized cooperative contracts to save on time and purchase savings
- All purchases have been done through the same manufacturer and delivering dealer
- Ongoing communication with both the manufacturer and dealer

Future Plans:

- Electric mowers
- Electric power equipment
